

Genuine DEUTZ Cooling Core Protect

Protection all year round.

Genuine DEUTZ coolant Core Protect is specifically engineered to ensure the performance, reliability and durability that our customers demand!

The benefits of Genuine DEUTZ Coolant Core Protect

- Formulated to suit all materials inside the DEUTZ engine
- Reliably prevents corrosion, cavitation and freezing
- Replacement only necessary every two years
- Free of nitrites, amines, 2-ethylhexanoic acid, silicates and phosphates
- Characterized by low maintenance requirements

All liquid-cooled engines require an effective product to ensure long-term conservation of the engine's cooling system. Reliably prevent corrosion, cavitation and freezing in all fast running engines with Genuine DEUTZ cooling system conditioner.

The coolant fulfils DEUTZ approval class DQC CB-14.

Usage instructions

Proportion of Cooling system conditioner	Antifreeze protection down to
min. 35 %	-20 °C
40 %	-26 °C
max. 50 %	-35 °C

The use of unsuitable cooling system conditioner often leads to leakage of the cooling system due to corrosion and incompatibility with the sealing materials. Pitting corrosion of aluminum components can, in the worst case, result in severe engine damage.
